(due to limitation by Apple's transfer protocol, the drive cannot perform as its normal speed 10MB/s)

Notice : Not capable of Sync or Charge

How i-FlashDrive is different ?

Direct File Transfer

So in the end, when we'd like to transfer files with another person. The plug-unplug i-FlashDrive is still the simplest way.

Without network

At all the file transfer when using i-FlashDrive, network is not required.

Free App for file management

There's a free App for this accessory that created a user interface for file management which most of us are familiar with. It has also built-in Music Play UI, Photo Import from CameraRoll, and voice recording. Those function that comes very handy in daily use.

Music play interface

Playlist in folders

By tapping any mp3 in a folder, the App automatically generates a playlist including all songs in the same folder. (not including sub-directory)

New Playlist

Move/put songs into a new folder, then it's a new playlist. It's just that simple.

Alternative outputs

when BlueTooth or AirPlay is available in the same environment, the optional button will become available to choose outputs
